IG.com Homepage Migration - Admin Guide

Complete administration guide for managing the IG.com homepage on AEM Edge Delivery Services (AEM authoring for Edge Delivery Services / Universal Editor).

This project uses a **standard, single-repo setup** with **AEM as the content source** (AEM authoring for Edge Delivery Services). Content is authored in AEM, delivered through the Edge Delivery Services content pipeline, and served on the `.aem.page` (preview) and `.aem.live` (production) hosts.

☒ GO-LIVE STATUS — LIVE (previously blocked)

STATUS: RESOLVED — the homepage is published and serving. History retained below for reference.

The IG.com homepage is **live** at `https://main--iggroup--agnesl-adobe.aem.live/` (and preview at `...aem.page/`). It maps to the site root `/perpaths.json`. Preview + publish were run via `admin.hlx.page` once the instance-side registration was completed.

What had blocked it (resolved)

iggroup had not been registered as an Edge Delivery Services site on author environment **p179457-e1900808**. The `franklin.delivery` content-services servlet was installed and working (proven: `.../al-wknd/main/index.html` → 200), but the per-site AEM registration (cloud config) for **iggroup** was missing: no `/conf/iggroup` Edge Delivery cloud config, the site root's `cq:conf` inherited `/conf/global`, and `allowedTemplates` referenced `jlr-demo`.

Resolution: the AEM team completed the EDS site registration for **iggroup** (mirroring `al-wknd`) — `/conf/iggroup` cloud config wired to content root `/content/iggroup/language-masters`, `cq:conf` repointed, `allowedTemplates` scoped to **iggroup**. After that, `.../iggroup/main/index.html` returned markup and preview + publish succeeded.

The Config Service content source for this site is:

```
https://author-p179457-e1900808.adobecloud.com/bin/franklin.delivery/agnesl-adobe/iggroup/main
```

Verify (should all pass now)

```
curl -i ".../bin/franklin.delivery/agnesl-adobe/iggroup/main/index.html" # -> 200 markup
curl -sI "https://main--iggroup--agnesl-adobe.aem.live/" # -> 200
```

Post-go-live operational item — image hosting (403)

The migrated content references IG's own image URLs (`a.c-dn.net`, `www.ig.com/content/dam/...`). IG's asset server **hotlink-blocks the `aem.live/aem.page` origin (HTTP 403)**, so those images do not display on the delivered site even though the `<img>/<picture>` markup is correct. To resolve, either serve the images from the IG production domain (allow the `aem.live` origin) or migrate the assets into this project's own DAM and repoint the URLs. This is an asset-hosting decision, not a code fix.

Proof

1. **Servlet works for a properly-registered site** — `al-wknd` returns markup:

```
curl -i ".../bin/franklin.delivery/agnesl-adobe/al-wknd/main/index.html" # -> 200
```

2. **Same servlet, iggroup path, fails** — because iggroup's AEM registration is incomplete:

```
curl -i ".../bin/franklin.delivery/agnesl-adobe/iggroup/main/index.html" # -> 404
(content not resolved)
```

Root cause (confirmed on the instance): iggroup had **no /conf/iggroup cloud config**. The site root's cq:conf pointed at /conf/global, and allowedTemplates referenced jlr-demo. A manual /conf/al-wknd → /conf/iggroup copy plus a cq:conf repoint got the servlet to *engage* for iggroup (bare /main now returns 400 instead of a hard 404, and the admin.hlx.page error shifted from .../main/en.html to .../main/en), but content still 404s because the copied config is **not fully wired for iggroup**.

Corroborating signal from the Config Service: the working al-wknd site config carries an apiKeys entry labelled "helix-bot setup-wizard (admin, 30m)" — evidence it was registered through the EDS **setup-wizard**. iggroup's config has an empty apiKeys: {}, i.e. the setup-wizard was never run for it.

Note: An earlier version of this guide stated the servlet itself was "not installed." That was incorrect — the servlet is present and working (proven by al-wknd). The accurate root cause is the **incomplete per-site EDS registration for iggroup**, documented above.

Consequence

The same missing integration surfaces as **three distinct symptoms**, all with the same root cause:

1. admin.hlx.page preview returns AEM_BACKEND_FETCH_FAILED: "(404) resource not found ... Unable to fetch /index.md from html2md".
2. No path has ever served through Edge Delivery Services; **no preview operation has ever fired**. https://main--iggroup--agnesl-adobe.aem.page/ returns **404**.
3. aemcoder → Sync → Content → "Create content package" shows a red "Missing site configuration" toast, which disables the dialog's **Preview & Publish** button. The dialog itself works — it enumerates local content and correctly finds/selects the en page ("1 of 1 pages selected") — but it cannot resolve a publishable site configuration because the same content-services integration is absent on the instance. This is **not** a missing repository config file (.migration/project.json, migration-work/profile.json, fstab.yaml, paths.json, and the admin.hlx.page Config Service entry were all verified present and correct — the last is structurally identical to a working xwalk site on the same instance). It is **not** caused by a deleted /content/<site>/configuration node either — a working xwalk site on this instance has no such node.

What is NOT the problem

- **Authentication is verified WORKING.** admin.hlx.page/profile returns **200** as agnesl@adobe.com with full read/write/delete permissions on both preview and live. This is **not** an auth problem.
- **The repository/content side is DONE** (see "Deployment State" below). No repo change will fix this.

ACTION REQUIRED (AEM / Cloud Manager team)

Run the proper AEM Edge Delivery Services site-registration / setup-wizard for **iggroup** on environment **p179457-e1900808**, mirroring how the working al-wknd site is registered. The manual /conf copy is not sufficient — complete the per-site registration:

1. Create a `/conf/iggroup` **Edge Delivery cloud config** pointing at content root `/content/iggroup/language-masters`.
2. Set **cq:conf on the iggroup site root** to `/conf/iggroup` (currently inherits `/conf/global`).
3. Scope **allowedTemplates** to `iggroup` (currently references `jlr-demo`).
4. Prefer running the **EDS setup-wizard** so the registration matches `al-wknd` exactly (the wizard is what produced `al-wknd's helix-bot setup-wizard apiKey`; `iggroup's apiKey` is empty).

This is an AEM instance configuration task — **not** a code or content change in the repository.

Definition of Done

1. `.../bin/franklin.delivery/agnesl-adobe/iggroup/main/index.html` returns **markup (200)** — matching `al-wknd's` behaviour.
2. Then `https://main--iggroup--agnesl-adobe.aem.page/` serves the homepage.
3. The **preview + publish step is already staged** and will run immediately once unblocked (homepage maps to web path `/` per `paths.json`).

Secondary follow-up (config migration)

`paths.json` still references the deprecated **file-based config** (`.helix/config.json`), which returns `AEM_BACKEND_CONFIG_NOT_SUPPORTED` — *"File based config no longer supported."* Configuration must live in the **Config Service** (see the Config Service section below). Address this as part of unblocking.

Deployment State (for context)

Complete on the repository / Edge Delivery Services side:

Item	Status
Content — IG.com homepage migrated (single home template, 12 sections, 8 block variants)	☑ Done — <code>content/en/plain.html</code>
Code (blocks / CSS / JS) deployed and live on the code bus (200s on <code>aem.page</code> for <code>/blocks/</code> , <code>/scripts/</code> , <code>/styles</code>)	☑ Done
JCR package <code>jcr/iggroup-en-homepage-1.0.0.zip</code> installed in AEM; page at <code>/content/iggroup/language-masters/en</code> , renders in Universal Editor	☑ Done
Model fixes + design + config fixes committed and pushed to <code>main</code>	☑ Done
AEM content-services servlet on p179457-e1900808	☒ BLOCKED — see top action item
Preview + publish of the homepage	☒ Staged, runs immediately once unblocked

Quick Reference

URLs

Purpose	URL
Login	https://admin.hlx.page/login/agnesl-adobe/iggroup
Config Service	https://admin.hlx.page/config/agnesl-adobe/
Preview	https://main-iggroup-agnesl-adobe.aem.page/
Live	https://main-iggroup-agnesl-adobe.aem.live/
AEM Author	https://author-p179457-e1900808.adobe.aemcloud.com/
EDS delivery endpoint (blocked)	https://author-p179457-e1900808.adobe.aemcloud.com/bin/franklin.delivery/agnesl-adobe/iggroup/main

Project Identity

Property	Value
Organization (Config Service)	agnesl-adobe
Site	iggroup
Setup type	Standard (single site) — AEM authoring for Edge Delivery Services
Code repo	agnesl-adobe/iggroup (GitHub)
AEM environment	p179457-e1900808
Content source	AEM markup — ../bin/franklin.delivery/agnesl-adobe/iggroup/main
Content author page	/content/iggroup/language-masters/en
Homepage web path	/ (per paths.json)

Config Service

This project's configuration is managed through the **Config Service** (admin.hlx.page/config), which replaces the deprecated file-based `.helix/config.json`.

View the site configuration

```
curl -s -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/config/agnesl-adobe/sites/iggroup.json"
```

Key configuration blocks

Section	Purpose
code	Code repository: owner agnesl-adobe, repo iggroup, GitHub source
content.source	Content source: AEM markup endpoint on p179457-e1900808
content.contentBusId	Internal content-bus identifier
access.admin	Admin role membership and auth requirement (requireAuth: auto)

Migrate off file-based config (follow-up)

paths.json still references .helix/config.json, which is no longer supported and returns AEM_BACKEND_CONFIG_NOT_SUPPORTED. All configuration (content source, paths, headers) must be maintained in the Config Service. Update or remove the deprecated reference as part of go-live.

List all sites in the organization

```
curl -s -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/config/agnesl-adobe/sites.json"
```

Authentication

Confirmed working — admin.hlx.page/profile returns 200 as agnesl@adobe.com with full preview + live read/write/delete permissions.

Login

1. Open: <https://admin.hlx.page/login/agnesl-adobe/iggroup>
2. Sign in with your Adobe ID.
3. Copy the auth token for API operations and export it:

```
export AUTH_TOKEN="<your-token>"
```

Verify your profile / permissions

```
curl -s -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/profile"
```

Logout

```
curl -X POST \  
  -H "x-auth-token: $AUTH_TOKEN" \  
  "https://admin.hlx.page/logout/agnesl-adobe/iggroup/main"
```

User Management & Permissions

Current admin (from Config Service): agnesl@adobe.com (full admin, requireAuth: auto).

View current access

```
curl -s -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/config/agnesl-adobe/sites/iggroup/access.json"
```

Add a user

Role	Command
Admin	POST /config/agnesl-adobe/sites/iggroup/access/admin.json with body {"users": ["email"]}
Author	POST /config/agnesl-adobe/sites/iggroup/access/author.json with body {"users": ["email"]}

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  -H "Content-Type: application/json" \
  -d '{"users": ["newadmin@example.com"]}' \
  "https://admin.hlx.page/config/agnesl-adobe/sites/iggroup/access/admin.json"
```

Remove a user

```
curl -X DELETE \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/config/agnesl-adobe/sites/iggroup/access/admin/newadmin@example.com.json"
```

Content Operations (Admin API)

⚠ These operations require the go-live blocker to be resolved first. Until the content-services servlet is installed on p179457-e1900808, preview will return AEM_BACKEND_FETCH_FAILED.

Preview

Operation	Endpoint
Homepage (web path /)	POST /preview/agnesl-adobe/iggroup/main/
Single page	POST /preview/agnesl-adobe/iggroup/main/{path}
Bulk preview	POST /preview/agnesl-adobe/iggroup/main/*

```
# Homepage preview (staged – run immediately once unblocked)
curl -X POST \
```

```
-H "x-auth-token: $AUTH_TOKEN" \
"https://admin.hlx.page/preview/agnesl-adobe/iggroup/main/"
```

Publish (go live)

Operation	Endpoint
Homepage	POST /live/agnesl-adobe/iggroup/main/
Single page	POST /live/agnesl-adobe/iggroup/main/{path}
Bulk publish	POST /live/agnesl-adobe/iggroup/main/*
Unpublish	DELETE /live/agnesl-adobe/iggroup/main/{path}

```
# Homepage publish
curl -X POST \
-H "x-auth-token: $AUTH_TOKEN" \
"https://admin.hlx.page/live/agnesl-adobe/iggroup/main/"
```

Staged go-live sequence (once unblocked)

```
# 1. Preview the homepage
curl -X POST -H "x-auth-token: $AUTH_TOKEN" \
"https://admin.hlx.page/preview/agnesl-adobe/iggroup/main/"

# 2. Verify preview serves
curl -I "https://main--iggroup--agnesl-adobe.aem.page/" # expect 200

# 3. Publish the homepage
curl -X POST -H "x-auth-token: $AUTH_TOKEN" \
"https://admin.hlx.page/live/agnesl-adobe/iggroup/main/"

# 4. Verify live serves
curl -I "https://main--iggroup--agnesl-adobe.aem.live/" # expect 200
```

Cache Management

Operation	Endpoint
Purge a path	POST /cache/agnesl-adobe/iggroup/main/{path}
Purge all	POST /cache/agnesl-adobe/iggroup/main/*

```
# Purge the homepage from the CDN cache
curl -X POST \
-H "x-auth-token: $AUTH_TOKEN" \
"https://admin.hlx.page/cache/agnesl-adobe/iggroup/main/"
```

If content does not refresh after publish, re-run the preview + live operations, then purge the cache. For stubborn cases include `{"forceUpdate": true}` in the request body.

Code Operations & Sync

The code (blocks, CSS, JS) is deployed and live on the code bus. Code changes pushed to main in agnesl-adobe/iggroup sync automatically via the GitHub integration.

Manually force a code sync

```
curl -X POST \
  -H "x-auth-token: $AUTH_TOKEN" \
  "https://admin.hlx.page/code/agnesl-adobe/iggroup/main"
```

Verify code assets are serving

```
curl -I "https://main--iggroup--agnesl-adobe.aem.page/scripts/scripts.js" # expect 200
curl -I "https://main--iggroup--agnesl-adobe.aem.page/styles/styles.css" # expect 200
```

⚠ Author-side code mirror out of sync (Universal Editor shows stale blocks)

There are two separate code mirrors — do not confuse them:

1. **Code bus** (feeds the published site *.aem.page / *.aem.live) — synced via admin.hlx.page, governed by the POST /code/... command above. **This one is correct.**
2. **Author code mirror** (feeds the **Universal Editor canvas**), served per-file from the AEM author instance at:

```
https://author-p179457-e1900808.adobecloud.com/content/iggroup.resource/blocks/
<block>/<block>.js
```

This is **AEM Code Sync** (the Code Sync GitHub app + instance integration) — separate from the code bus, and **NOT** refreshable via admin.hlx.page.

Symptom: the UE canvas renders old block code (e.g. old ig square logo instead of IG_LOGO.svg, a removed red "Log in" in the nav, stacked red CTAs instead of the centered red + outline row, header overlap) while the published *.aem.page page is correct. Reloading the UE shows an unstable mix — some files current, some stale — because the author mirror lazily fetches per file and lags GitHub.

Root cause: AEM Code Sync for iggroup was never fully/reliably established — the same incomplete-onboarding pattern as the EDS site registration. The repo and the published site are correct and need no changes; only the author-side mirror lags.

ACTION REQUIRED (AEM / Cloud Manager team, env p179457-e1900808):

1. Verify/install the **AEM Code Sync GitHub app** on github.com/agnesl-adobe/iggroup and confirm the instance integration for iggroup@main.
2. Trigger a **full re-sync** so /content/iggroup.resource/... completely mirrors the repo (not just the per-file lazy fetches).
3. Confirm it updates on **every push** without manual nudges.

Done when: the UE canvas matches https://main--iggroup--agnesl-adobe.aem.page/ — correct IG logo, no red "Log in" in the nav, centered red + outline CTA row, superscript "provider", no header overlap — and stays correct across reloads.

Per-file check (compare the three sources — GitHub and code bus already match):

```
# Author mirror (should contain IG_LOGO and header-disclaimer once synced):
curl -s ".../content/iggroup.resource/blocks/header/header.js" | grep -E 'IG_LOGO|header-disclaimer'
# Reference (both already correct):
curl -s "https://raw.githubusercontent.com/agnesl-adobe/iggroup/main/blocks/header/header.js" | grep -cE 'IG_LOGO|header-disclaimer' # 3
curl -s "https://main--iggroup--agnesl-adobe.aem.page/blocks/header/header.js" | grep -cE 'IG_LOGO|header-disclaimer' # 3
```

Common Tasks

Task	Steps
Unblock go-live	AEM/Cloud Manager team installs the content-services servlet on p179457-e1900808 (see top action item)
Go live (once unblocked)	POST /preview/.../main/ then /live/.../main/ (staged sequence above)
Add a new admin	POST to /config/agnesl-adobe/sites/iggroup/access/admin.json
Republish the homepage	POST /preview/agnesl-adobe/iggroup/main/ then /live/agnesl-adobe/iggroup/main/
Clear cache	POST to /cache/agnesl-adobe/iggroup/main/*
Deploy code changes	Push to main; or force sync via POST /code/agnesl-adobe/iggroup/main
Check config	GET /config/agnesl-adobe/sites/iggroup.json

Troubleshooting

Issue	Diagnosis / Solution
AEM_BACKEND_FETCH_FAILED on preview (Unable to fetch /index.md from html2md)	The go-live blocker. Content-services servlet not installed on p179457-e1900808. Escalate to AEM/Cloud Manager team. Not a repo issue.
/bin/franklin.delivery/... returns 404 ("Cannot serve request... on this server")	The EDS delivery servlet is absent on the instance. Provision the AEM-authoring-for-EDS integration.
AEM_BACKEND_CONFIG_NOT_SUPPORTED ("File based config no longer supported")	paths.json references deprecated .helix/config.json. Move config to the Config Service.
aem.page/ returns 404	Nothing has been previewed yet (blocked). Resolves once the servlet is installed and preview runs.
aemcoder "Missing site configuration" on Create content package (Preview & Publish greyed out)	Same go-live blocker — the content-services integration is absent on p179457-e1900808, so aem-coder cannot resolve a publishable site configuration. NOT a missing repo config file and NOT a deleted /content/<site>/configuration node (a working xwalk site has none). Resolves once the servlet is installed.
401 Unauthorized	Token expired — login again.
403 Forbidden	Insufficient permissions — check role in access.json.

Issue	Diagnosis / Solution
404 Not Found (API)	Check org/site/path spelling.
429 Rate Limited	Wait and retry.
Cache not clearing	Re-run preview + live, then purge cache with <code>forceUpdate: true</code> .
Code not syncing (published site)	Force sync: <code>POST /code/agnesl-adobe/iggroup/main</code> .
Universal Editor shows stale/old block code (old logo, removed "Log in", stacked CTAs, header overlap) while <code>*.aem.page</code> is correct	Author-side AEM Code Sync mirror (<code>/content/iggroup.resource/...</code>) is lagging — a separate mirror from the code bus, NOT fixable via <code>admin.hlx.page</code> . (Re)install the Code Sync GitHub app + integration on <code>p179457-e1900808</code> and trigger a full re-sync. See "Author-side code mirror out of sync" above. Not a repo issue.
