# IG.com Homepage - Author Guide

This guide is for content authors and content managers taking over the **IG.com homepage** on AEM Edge Delivery Services. The homepage is authored in the **Universal Editor** against the AEM author instance and delivered through Edge Delivery Services.

**Important status note (as of September 15, 2026):** The site is not yet serving on Edge Delivery Services delivery. There is an AEM instance-side provisioning blocker — the Edge Delivery Services content-services servlet is not yet installed on environment p179457-e1900808. You can author and Publish now, but published content will only surface on the delivery tier (aem.page / aem.live) once that provisioning is resolved. See [Publishing Workflow](#) for detail.

## Quick Reference

| Resource                  | URL                                                                                |
|---------------------------|------------------------------------------------------------------------------------|
| Universal Editor (author) | Open the homepage node in AEM and click <b>Edit</b> to launch the Universal Editor |
| AEM Author instance       | <code>https://author-p179457-e1900808.adobe.aemcloud.com</code>                    |
| Homepage content path     | <code>/content/iggroup/language-masters/en</code> (maps to web path /)             |
| Preview (delivery)        | <code>https://main--iggroup--agnesl-adobe.aem.page/</code>                         |
| Live (delivery)           | <code>https://main--iggroup--agnesl-adobe.aem.live/</code>                         |
| Code repository           | <code>https://github.com/agnesl-adobe/iggroup</code>                               |

## Site

| Site    | Content Source                                  | Preview                                                  | Live                                                     |
|---------|-------------------------------------------------|----------------------------------------------------------|----------------------------------------------------------|
| iggroup | AEM author (p179457-e1900808), Universal Editor | <code>https://main-iggroup-agnesl-adobe.aem.page/</code> | <code>https://main-iggroup-agnesl-adobe.aem.live/</code> |

This is a **crosswalk (xwalk)** / **Universal Editor** project. Content is **not** authored in Document Authoring (DA) or a spreadsheet — it lives in AEM and is edited visually in the Universal Editor. The content source in the Config Service is of type markup, pointing at the AEM author delivery endpoint for `agnesl-adobe/iggroup/main`.

## Getting Started

### Access Requirements

- Access to the AEM author instance (p179457-e1900808) — request from your admin

- ☐ Universal Editor edit permissions on `/content/iggroup`
- ☐ Publish (replication) permissions

## Editing the Homepage

1. Log in to the AEM author instance.
2. Navigate to the homepage node: `/content/iggroup/language-masters/en` (this maps to the web root `/`).
3. Open the page and click **Edit** to launch the **Universal Editor**.
4. Select any section or block on the canvas; edit its content and properties in the **Properties** rail on the right.
5. Add new blocks from the **Components** / insert menu (only blocks allowed by the section filter appear).
6. **Preview** your changes, then **Publish** when ready.

---

## Content Organization

### Structure

The homepage is a single page built from one **home** template composed of **12 sections**. Each section is a container that holds one custom block (plus optional default content). Sections are ordered top to bottom and can each carry a background style and spacing (see [Sections and Section Styles](#)).

### Template

| Template    | Purpose                                                                                                                               | How it is applied                                                                                                                                                                  |
|-------------|---------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>home</b> | The single template used for the IG.com homepage. Defines the 12-section layout and the set of blocks/section styles authors can use. | Applied automatically to the homepage node at <code>/content/iggroup/language-masters/en</code> . Authors work within this template — there is no template picker to set per page. |

### Languages

The homepage lives under `language-masters/en` (English). This is the language-master source used for the homepage; no additional language variants are configured for this handover.

---

## Available Blocks

The homepage uses **8 custom block variants** built specifically for IG.com. Insert them from the Universal Editor component menu. All are authored as a single block instance you fill in via the Properties rail.

| Block                  | Base type | Purpose                                                                                                        | When to use                                                  |
|------------------------|-----------|----------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------|
| <b>hero-product</b>    | hero      | Full-width product hero at the top of the page — headline, supporting copy, and calls to action over an image. | Lead section introducing the primary product/message.        |
| <b>carousel-prices</b> | carousel  | Scrolling carousel of live market prices / instruments.                                                        | Showcasing market prices in a horizontally scrollable strip. |
| <b>cards-markets</b>   | cards     | Grid of cards linking to markets (e.g. indices, forex, shares).                                                | Presenting the range of tradable markets as cards.           |

| Block                  | Base type | Purpose                                                      | When to use                                                          |
|------------------------|-----------|--------------------------------------------------------------|----------------------------------------------------------------------|
| <b>cards-stats</b>     | cards     | Grid of key statistics / proof points (numbers with labels). | Highlighting metrics such as clients, markets, or years in business. |
| <b>columns-promo</b>   | columns   | Promotional columns pairing copy with imagery/CTA.           | Promoting an offer, product, or campaign in a columned layout.       |
| <b>columns-feature</b> | columns   | Feature columns describing a product or platform benefit.    | Explaining features/benefits side by side.                           |
| <b>columns-links</b>   | columns   | Columns of grouped links (link lists).                       | Directory-style navigation to deeper content.                        |
| <b>columns-steps</b>   | columns   | Numbered/sequential steps laid out in columns.               | Explaining a process such as "how to open an account".               |

Each block has an authoring README in the repository at `blocks/<block-name>/README.md`. These variants have **no sub-variations** — you insert the block and fill in its content directly.

**Standard blocks also available** in this project include hero, cards, carousel, columns, accordion, tabs, quote, teaser, title-block, video, embed/iframe, fragment, content-fragment, form, and others. The 8 custom variants above are the ones designed for the homepage layout.

## Sections and Section Styles

The page is divided into **sections**. Each section can be given a background style and spacing through the **section properties** in the Universal Editor.

### Available Section Styles

| Style                 | Value                                         | Effect                                                                                                                                       |
|-----------------------|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Base / Default</b> | <code>bg-default</code> (Transparent / White) | Default white/transparent background.                                                                                                        |
| <b>Accent</b>         | <code>accent</code>                           | IG light-blue accent panel ( <code>--brand-accent-panel-color</code> ), 56px vertical padding, rounded 16px panel for single-block sections. |
| <b>Grey</b>           | <code>grey</code>                             | Light-grey panel ( <code>--brand-light-color</code> ), 56px vertical padding, rounded 16px panel for single-block sections.                  |

Additional background options exposed in the section model include Dark (Primary Blue), Primary Blue 90/70, Neutrals 10/20, and Background Image. For the IG.com homepage, the intended palette is **base**, **accent**, and **grey**.

### Section Spacing and Options

Sections also expose **Spacing Top** and **Spacing Bottom** controls (from No space up through xhuge), an optional **Swoosh** decoration, a **reduce section width** toggle, and a **show background inside container** toggle. Set these in the section's Properties rail.

## Page Metadata

Set on the page itself via the Universal Editor Page Properties.

| Property                | Required    | Purpose                                                         | Example                                 |
|-------------------------|-------------|-----------------------------------------------------------------|-----------------------------------------|
| jcr:title               | Yes         | Page title                                                      | "IG.com Homepage"                       |
| jcr:pagetitle           | Recommended | Browser/SEO page title                                          | "IG - Trade Forex, Shares, Indices"     |
| jcr:description         | Yes         | SEO / social description                                        | "Trade CFDs on thousands of markets..." |
| cq:tags                 | No          | Taxonomy tags                                                   | —                                       |
| theme                   | No          | Theme override (default, gray, red, blue, green, We-Healthcare) | leave default                           |
| pageName / pageCategory | No          | Analytics labels                                                | "home" / "homepage"                     |

## Publishing Workflow

| Environment | Domain                                     | Purpose                                           |
|-------------|--------------------------------------------|---------------------------------------------------|
| Author      | author-p179457-e1900808.adobe.aemcloud.com | Where you edit in the Universal Editor            |
| Preview     | main--iggroup--agnesl-adobe.aem.page       | Preview of published content on the delivery tier |
| Live        | main--iggroup--agnesl-adobe.aem.live       | Production delivery                               |

**Workflow:** Edit in Universal Editor → **Preview** → **Publish** → content is sent to Edge Delivery Services delivery.

**Current blocker:** Publishing works from the author side, but content will **not** yet appear on aem.page / aem.live because the Edge Delivery Services **content-services servlet is not installed** on environment p179457-e1900808. This is an AEM instance-side provisioning issue, not an authoring error. Once the servlet is provisioned, published pages will surface on the delivery tier automatically — no re-authoring required. Until then, verify your work in the Universal Editor preview.

## Common Tasks

| Task                        | Steps                                                                                                           |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------|
| Edit homepage copy          | Open /content/iggroup/language-masters/en → Edit → select block → change text in Properties → Preview → Publish |
| Add a section block         | Select the target section → insert a block from the Components menu → fill in content → Publish                 |
| Change a section background | Select the section → set <b>Background style</b> to accent / grey / default in Properties → Publish             |

| Task                   | Steps                                                                                          |
|------------------------|------------------------------------------------------------------------------------------------|
| Adjust section spacing | Select the section → set <b>Spacing Top / Bottom</b> → Publish                                 |
| Reorder sections       | Use the Content Tree in the Universal Editor to drag sections into the desired order → Publish |
| Update page SEO        | Open Page Properties → edit Title / Description → Publish                                      |

---

## Troubleshooting

| Issue                                             | Solution                                                                                                                                                                              |
|---------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Published page not visible on aem.page / aem.live | Expected right now — the content-services servlet is not yet installed on p179457-e1900808. Verify in the Universal Editor preview; delivery will work once provisioning is complete. |
| Block not appearing in the insert menu            | The section filter only allows certain components; confirm you are inserting into a section that permits that block.                                                                  |
| Changes not reflected after Publish               | Confirm you clicked Publish (not just Save), then allow cache to refresh and hard-refresh (Cmd/Ctrl+Shift+R).                                                                         |
| Section style not applied                         | Re-check the <b>Background style</b> value in the section Properties (accent / grey / default).                                                                                       |
| Image not showing                                 | Ensure the asset is referenced from AEM Assets and has alt text set.                                                                                                                  |

---

## Resources

| Resource                              | URL                                                                                                                                                                                                                                                                                                   |
